                                                              В
                                                                                                                                                                                                          The invention relates to new mutant Staphylococcus aureus V8 proteases CC which have enzyme activity even under environmental conditions which CC promote protein denaturation. The mutants are based on 3 truncated V8 CC proteases lacking 48 (AAW22218), 56 (AAW22219) or 53 (AAW22220) amino CC acids from the C-terminal of the wild type protease. The mutants also CC contain amino acid substitutions, especially D44E, N71S and/or R147K. CC The protein sequence shown here represents a chimaeric protein CC comprising a truncated Staphylococcus aureus V8 protease lacking the CC prepro and C-terminal 53 amino acids linked, via a synthetic R6 linker, CC downstream of the E. coli beta-galactosidase. Also included downstream of the V8 protease fragment is a second R6 linker and a fragment of the CC maninoglucoside 3'-phosphotransferase protein. The chimaeric sequence was generated by restriction digestion and ligation from the V8RP7(-) CC sequence (see AAW22218) by using a natural EcoRV site which removed a CC designated V8F, retains its level of activity in the presence of a CC higher concentration of protein denaturant e.g. 5 M urea.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seq

"CEL1: a novel cellulose binding protein secreted by Agaricus bisporus during growth on crystalline cellulose.";
FEMS Microbiol. Lett. 116:293-299(1994).
1- FUNCTION: PROBABLE GLYCOSYL HYDROLASE ACTIVE ON CELLULOSE.
1- SUBCELLULAR LOCATION: Secreted.
1- SIMILARITY: CONTAINS 1 FUNGAL-TYPE CELLULOSE-BINDING DOMAIN
1- SIMILARITY: BELONGS TO FAMILY 61 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                               PLYB_AS

                                                                                                                                                             Aminoacyl-tRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COMPRISED OF A BIFUNCTIONAL GLUTAMYL-PROLYL-TRNA SYNTHETASE, THE MONOSPECIFIC ISOLEUCYL, LEUCYL, GLUTAMINYL, METHIONYL, LXSYL, ARGINYL, AND ASPARTYL-TRNA SYNTHETASES AS WELL AS THREE AUXILIARY PROTEINS, P18, P48 AND P43.

SIMILARITY: IN THE N-TERMINAL LSCTION; BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.

SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO CLASS-II AMINOACYL-TRNA SYNTHETASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           diphosphate + L-glutamyl-trnà(Glu).
CATALYTIC ACTIVITY: ATP + L-proline + trna(Pro) = AMP +
diphosphate + L-prolyl-trna(Pro).
SUBUNIT: COMPONENT OF THE MULTISYNTHETASE COMPLEX WHICH IS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SIMILARITY: CONTAINS 6 WHEP-TRS DOMAINS.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

(DPP-7) enzyme. The DP-7 enzyme has amidolytic activity for cleavage of a peptide bond between the second and third amino acids from the N-terminal end of a target peptide. The DPP-7 target peptide has an aliphatic or aromatic residue as a substituent on the alpha-carbon atom of the second amino acid from the N-terminal end. The DPP-1 protein and DNA sequences of the invention are useful for identifying a DPP-7 inhibitor. DPP-7 inhibitors are useful for reducing the growth of a bacterium and protecting an animal from a periodontal disease caused by Porphyromonas gingivalis (e.g. glupivitis or periodontitis). The present DNA sequence encodes the Porphyromonas gingivalis dipeptidylpeptidase-7 (DPP-7) enzyme of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                В
                 The present sequence is that of the N.meningitidis strain BZ163 transferrin Tbp2 subunit gene. The Tbp2 polypeptide has three domains: an N-terminal domain, a hinge domain and a C-terminal domain; deletion mutants in which at least one of the domains is partially or totally deleted are claimed, provided that the first and second domains are not simultaneously partially or totally deleted. The positions of the 3 domains in BZ163 are defined by alignment with the IMZ169 sequence. The deletion mutant polypeptid of the invention can generate an immune response against
                                                                                                                                                                                                                                                                                                       (INMR )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2104

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length CDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs. The primers allow obtaining of the full-length CDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 represent human amino acid sequences; AAB92446 to AAH3633 represent oligonucleotides, all of which are used in the exemplification of the protein second of the protein second and the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the 5002 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAAI38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or nolynucleotide of the invention may he used to containing a polypeptide or nolynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-AUG-2000;

               in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzhelmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome on ther uses include the utilisation of the activities such as: Immune system suppression, Activin/Inhibin activity, chemotactic/chemokinetic activity, haemostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; nootropic; immunosuppressant; cytostatic; gene therapy; cance peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemothetic; thrombolytic; drug screening; arthritis; inflammation; chemothetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wang

The primers are useful for synthesising polynucleotides, carticularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH3368 and CAAH3363 to AAH374 represent human cDNA sequences; AAB9246 to AAH3589 arepresent human amino acid sequences; and AAH31629 to AAH3362 conference of the areas of inventions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-JUL-1999; 99JP-0248036.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences.
